

BAND\_Project #1: Interpret a Data Visualization

Insight #1: Kenya has the highest total number of deaths per year and per day caused by Malaria. This information is found by rolling the cursor over the map to the darkest shaded country, which indicates the highest number of deaths caused by Malaria.

Insight #2: Between 2000 and 2003, the number of deaths caused by Malaria in Kenya far surpassed the country average of 1,303. The total number of deaths for that period ranged from approximately 48,000 to over 51,000. This information is found by clicking Kenya on the map, click on each corresponding dark shaded year for the period 2000-2003, then click on Explain Data on the pop-up for information on each year.

BAND\_Project #1: Interpret a Data Visualization

Insight #3: Kenya saw a dramatic drop in cases of death caused by Malaria in the years 2011 to 2014, with its lowest number of 360 in 2013, substantially lower than the Africa yearly average of 1,303, and its 2003 high of over 51,000 cases. Click on Kenya, click Yes on the drop down menu at the bottom of the bar diagram to show the Africa average line, click on the bars for the corresponding years mentioned, then click Explain Data on the pop-up for corresponding numbers for those years.
